## Introduction

This data review covers thirteen air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U      Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J      Indicates an estimated value.
- R      Quality control indicates the data is not usable.
- N      Presumptive evidence of presence of the constituent.
- UJ     Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A      Indicates the finding is based upon technical validation criteria.
- P      Indicates the finding is related to a protocol/contractual deviation.
- None    Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

## **VIII. Laboratory Control Samples (LCS)**

Although laboratory control samples were not required by the method, laboratory control

samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P

## **IX. Regional Quality Assurance and Quality Control**

Not applicable.

## **X. Internal Standards**

All internal standard areas and retention times were within QC limits.

## **XI. Target Compound Identifications**

Raw data were not reviewed for this SDG.

## **XII. Compound Quantitation and CRQLs**

Raw data were not reviewed for this SDG.

## **XIII. Tentatively Identified Compounds (TICs)**

Raw data were not reviewed for this SDG.

#### XIV. System Performance

Raw data were not reviewed for this SDG.

#### XV. Overall Assessment of Data

Data flags have been summarized at the end of the report.

#### XVI. Field Duplicates

Samples FCS-SP05-20 and FCS-SP05D-20 were identified as field duplicates. No volatiles were detected in any of the samples with the following exceptions:

## Introduction

This data review covers eleven air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U      Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J      Indicates an estimated value.
- R      Quality control indicates the data is not usable.
- N      Presumptive evidence of presence of the constituent.
- UJ     Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A      Indicates the finding is based upon technical validation criteria.
- P      Indicates the finding is related to a protocol/contractual deviation.
- None    Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%RSD	Associated Samples	Flag	A or P
7/7/03	Chloromethane	31	All samples in this SDG	J detects UJ nondetects	A

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD) with the following exception:

Compound	Concentration (ppbv)		RPD
	FCS-SP10-20	FCS-SP10-20 Duplicate	
Methylene Chloride	180	80	77

Qualification of laboratory duplicate outliers was not specified in the QAPP.

### VIII. Laboratory Control Samples (LCS)

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

## **Introduction**

This data review covers twelve air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None    Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%RSD	Associated Samples	Flag	A or P
7/7/03	Chloromethane	31	All samples in this SDG	J detects UJ nondetects	A

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

### **VIII. Laboratory Control Samples (LCS)**

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
0307168B-24A	Bromomethane 1,2,4-Trimethylbenzene 1,4-Dichlorobenzene 1,2-Dichlorobenzene	67 (80-120) 74 (80-120) 75 (80-120) 79 (80-120)	All samples in the SDG	J detects UJ nondetects	A

### **IX. Regional Quality Assurance and Quality Control**

Not applicable.

### **X. Internal Standards**

All internal standard areas and retention times were within QC limits.

### **XI. Target Compound Identifications**

Raw data were not evaluated for this SDG.

### **XII. Compound Quantitation and CRQLs**

Raw data were not evaluated for this SDG.

### **XIII. Tentatively Identified Compounds (TICs)**

No TICs were reported.

#### **XIV. System Performance**

Raw data were not evaluated for this SDG.

#### **XV. Overall Assessment of Data**

Data flags have been summarized at the end of the report.

#### **XVI. Field Duplicates**

Samples FCS-SP10-20 (from SDG 0307168A) and FCS-SP10D-20 were identified as field duplicates. No volatiles were detected in any of the samples with the following exceptions:

## **Introduction**

This data review covers twelve air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None    Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

## **VIII. Laboratory Control Samples (LCS)**

Although laboratory control samples were not required by the method, laboratory control

samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
0307200-14A	Vinyl Chloride Chloroethane cis-1,3-Dichloropropene trans-1,3-Dichloropropene alpha-Chlorotoluene Chloromethane	121 (80-120) 123 (80-120) 123 (70-130) 128 (70-130) 122 (70-130) 145 (70-130)	All samples in the SDG	J detects	A

## **IX. Regional Quality Assurance and Quality Control**

Not applicable.

## **X. Internal Standards**

All internal standard areas and retention times were within QC limits.

## **XI. Target Compound Identifications**

Raw data were not evaluated for this SDG.

## **XII. Compound Quantitation and CRQLs**

Raw data were not evaluated for this SDG.

## **XIII. Tentatively Identified Compounds (TICs)**

No TICs were reported.

## **XIV. System Performance**

Raw data were not evaluated for this SDG.

## **XV. Overall Assessment of Data**

Data flags have been summarized at the end of the report.

## **XVI. Field Duplicates**

Samples 10D-SP30-10 and 10D-SP30D-10 were identified as field duplicates. No volatiles

were detected in any of the samples with the following exceptions:

Compound	Concentration (ppbv)		RPD
	10D-SP30-10	10D-SP30D-10	
Heptane	5.7	5.2	9.2
Acetone	140	97	36

## **Introduction**

This data review covers five air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds with the following exception:

Date	Compound	%RSD	Associated Samples	Flag	A or P
7/8/03	Chloromethane	31	All samples in this SDG	J detects UJ nondetects	A

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

### VIII. Laboratory Control Samples (LCS)

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

### IX. Regional Quality Assurance and Quality Control

Not applicable.

### X. Internal Standards

All internal standard areas and retention times were within QC limits.

### XI. Target Compound Identifications

Raw data were not evaluated for this SDG.

### XII. Compound Quantitation and CRQLs

Raw data were not evaluated for this SDG.

### XIII. Tentatively Identified Compounds (TICs)

No TICs were reported.

### XIV. System Performance

Raw data were not evaluated for this SDG.

### XV. Overall Assessment of Data

Data flags have been summarized at the end of the report.

### XVI. Field Duplicates

Samples 11D-SP25-10 and 11D-SP25D-10 were identified as field duplicates. No volatiles were detected in any of the samples with the following exceptions:

Compound	Concentration (ppbv)		RPD
	11D-SP25-10	11D-SP25D-10	
Methylene Chloride	10	10	9.5
Tetrachloroethene	10	9.7	3.0
Acetone	65	55	20
Ethanol	49	55	12

### XVII. Field Blanks

Although sample 11D-TB71003 was identified as a trip blank sample, it was not selected for validation. Acetone and ethanol were detected in this blank at concentrations of 35 ppbv and 240 ppbv, respectively.

Sample concentrations were compared to concentrations detected in the trip blank. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated method blanks with the following exceptions:

## **Introduction**

This data review covers two air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0% with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
7/21/03	Methyl tert-butyl ether (MTBE)	37	All samples in the SDG	J detects UJ nondetects	P

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the

method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

### **VIII. Laboratory Control Samples (LCS)**

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

## **Introduction**

This data review covers four air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None    Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

## **VIII. Laboratory Control Samples (LCS)**

Although laboratory control samples were not required by the method, laboratory control

samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
0307299-16A	Freon 12 Freon 114 Vinyl Chloride Bromomethane Chloroethane cis-1,3-Dichloropropene trans-1,3-Dichloropropene Tetrachloroethene Styrene alpha-Chlorotoluene Cumene 4-Ethyltoluene	128 (80-120) 121 (80-120) 129 (80-120) 126 (80-120) 128 (80-120) 128 (80-120) 122 (80-120) 122 (80-120) 134 (70-130) 142 (70-130) 131 (70-130) 141 (70-130)	All samples in the SDG	J detects	A

## **IX. Regional Quality Assurance and Quality Control**

Not applicable.

## **X. Internal Standards**

All internal standard areas and retention times were within QC limits.

## **XI. Target Compound Identifications**

All target compound identifications were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XII. Compound Quantitation and CRQLs**

All compound quantitation and CRQLs were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XIII. Tentatively Identified Compounds (TICs)**

No TICs were reported.

## **XIV. System Performance**

The system performance was within validation criteria for samples on which an EPA Level

IV review was performed. Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XV. Overall Assessment of Data**

Data flags have been summarized at the end of the report.

## **XVI. Field Duplicates**

There were no field duplicate samples identified in this SDG.

## **XVII. Field Blanks**

Trip blank sample 38D-TB71503 was not selected for validation. No volatile contaminants were detected in this blank above the reporting limits.

## **Introduction**

This data review covers five air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

Raw data was not provided for level IV review.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD) with the following exceptions:

Compound	Concentration (ppbv)		RPD
	36D-SP18-20	36D-SP18-20 Duplicate	
Chloroform	163	202	21
Trichloroethene	7081	8970	24
Tetrachloroethene	1239	1526	21

Qualification of laboratory duplicate precision outliers was not specified in the QAPP.

### VIII. Laboratory Control Samples (LCS)

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
0307323-19A	1,1-Dichloroethane 1,2-Dibromoethane 1,3,5-Trimethylbenzene 1,2,4-Trimethylbenzene 1,4-Dichlorobenzene 1,2-Dichlorobenzene Propylbenzene Hexachlorobutadiene Bromoform	78 (80-120) 79 (80-120) 75 (80-120) 73 (80-120) 76 (80-120) 77 (80-120) 74 (80-120) 75 (80-120) 79 (80-120)	All samples in the SDG	J detects, UJ nondetects	A

### IX. Regional Quality Assurance and Quality Control

Not applicable.

### X. Internal Standards

All internal standard areas and retention times were within QC limits.

### XI. Target Compound Identifications

All target compound identifications were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XII. Compound Quantitation and CRQLs**

All compound quantitation and CRQLs were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XIII. Tentatively Identified Compounds (TICs)**

No TICs were reported.

## **XIV. System Performance**

The system performance was within validation criteria for samples on which an EPA Level IV review was performed. Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XV. Overall Assessment of Data**

Data flags have been summarized at the end of the report.

## **XVI. Field Duplicates**

There were no field duplicate samples identified in this SDG.

## **XVII. Field Blanks**

Sample 36D-TB71603 was identified as a field blank sample. No volatile contaminants were found in this blank above the reporting limits.

## **Introduction**

This data review covers thirteen air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None    Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

Raw data was not provided for level IV review.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD) with the following exception:

Compound	Concentration (ppbv)		RPD
	39D-SP04-15	39D-SP04-15 Duplicate	
Acetone	62	51	18

Qualification of laboratory duplicate precision outliers was not specified in the QAPP.

### VIII. Laboratory Control Samples (LCS)

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

## **Introduction**

This data review covers eleven air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per modified EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

## **VIII. Laboratory Control Samples (LCS)**

Although laboratory control samples were not required by the method, laboratory control

samples were reported by the laboratory. Percent recoveries (%R) were within the QC limits with the following exceptions:

## **Introduction**

This data review covers six air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per modified EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

No precision data were reported for this sample batch.

## **VIII. Laboratory Control Samples (LCS)**

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within the QC

limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
0307410-12A	Freon 114 Methylene Chloride Ethanol	136 (80 – 120) 128 (80 – 120) 126 (80 – 120)	C14-TB72103, C14-SV03-20, C14-SV05-10, and C15-SV07-10	J detects	A

## **IX. Regional Quality Assurance and Quality Control**

Not applicable.

## **X. Internal Standards**

All internal standard areas and retention times were within QC limits.

## **XI. Target Compound Identifications**

All target compound identifications were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XII. Compound Quantitation and CRQLs**

All compound quantitation and CRQLs were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XIII. Tentatively Identified Compounds (TICs)**

No TICs were reported.

#### **XIV. System Performance**

The system performance was within validation criteria for samples on which an EPA Level IV review was performed. Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

#### **XV. Overall Assessment of Data**

Data flags have been summarized at the end of the report.

#### **XVI. Field Duplicates**

Samples C15-SV07-10 and C15-SV07D-10 were identified as field duplicates. No volatiles were detected in any of the samples with the following exception:

Compound	Concentration (ppbv)		RPD
	C15-SV07-10	C15-SV07D-10	
Acetone	82	53	43

#### **XVII. Field Blanks**

Sample C14-TB72103 was identified as a field blank sample. No volatile contaminants were found in this blank.

## **Introduction**

This data review covers ten air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per modified EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
7/25/03	sec-Butylbenzene	34	All samples in the SDG	J detects, UJ nondetects	A
7/25/03	1,2,3-Trimethylbenzene	37	All samples in the SDG	J detects, UJ nondetects	A

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within the QC limits of 15 relative percent difference (RPD) with the following exceptions:

Compound	Concentration (ppbv)		RPD
	D(e)-SP06-9	D(e)-SP06-9 Duplicate	
Toluene	6.0	7.3	19
Ethanol	104	87	18
2-Propanol	17	21	18

Qualification of laboratory duplicate precision outliers was not specified in the QAPP.

## VIII. Laboratory Control Samples (LCS)

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within the QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
0307449-13A	Chloroethane cis-1,3-Dichloropropene trans-1,3-Dichloropropene Heptane Chloromethane 2-Butanone (MEK) Ethanol	132 (80 – 120) 130 (80 – 120) 130 (80 – 120) 126 (80 – 120) 135 (80 – 120) 123 (80 – 120) 124 (80 – 120)	AJLA-SP06-10	J detects	A

## IX. Regional Quality Assurance and Quality Control

Not applicable.

## **X. Internal Standards**

All internal standard areas and retention times were within QC limits.

## **XI. Target Compound Identifications**

All target compound identifications were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XII. Compound Quantitation and CRQLs**

All compound quantitation and CRQLs were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XIII. Tentatively Identified Compounds (TICs)**

No TICs were reported.

## **XIV. System Performance**

The system performance was within validation criteria for samples on which an EPA Level IV review was performed. Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XV. Overall Assessment of Data**

Data flags have been summarized at the end of the report.

## **XVI. Field Duplicates**

Samples AJLA-SP01-10 and AJLA-SP01D-10 were identified as field duplicates. However, as sample AJLA-SP01-10 was received with significant vacuum remaining in the canister, the analysis of this sample was cancelled. Therefore, field duplicate precision was not evaluated for this SDG.

## **XVII. Field Blanks**

Sample D(e)-TB072203 was identified as a trip blank sample. No volatile contaminants were found in this blank with the following exception:

Field Blank ID	Compound	Concentration (ppbv)
D(e)-TB072203	Acetone	27

Sample concentrations were compared to concentrations detected in the trip blank. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated trip blank with the following exceptions:

Sample	Compound TIC (RT in minutes)	Reported Concentration (ppbv)	Modified Final Concentration (ppbv)
AJLA-SP06-10	Acetone	39	39U
AJLA-SP05-10	Acetone	24	24U
AJLA-SP04-10	Acetone	24	24U
AJLA-SP02-10	Acetone	85	85U
AJLA-SP03-10	Acetone	23	23U
AJLA-SP01D-10	Acetone	110	110U

## **Introduction**

This data review covers nine air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per modified EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within the 70% - 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

## **VIII. Laboratory Control Samples (LCS)**

Although laboratory control samples were not required by the method, laboratory control

samples were reported by the laboratory. Percent recoveries (%R) were within the QC limits with the following exceptions:

## IX. Regional Quality Assurance and Quality Control

Not applicable.

## X. Internal Standards

All internal standard areas and retention times were within QC limits.

## XI. Target Compound Identifications

All target compound identifications were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XII. Compound Quantitation and CRQLs**

All compound quantitation and CRQLs were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XIII. Tentatively Identified Compounds (TICs)**

No TICs were reported.

## **XIV. System Performance**

The system performance was within validation criteria for samples on which an EPA Level IV review was performed. Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XV. Overall Assessment of Data**

Data flags have been summarized at the end of the report.

## **XVI. Field Duplicates**

Samples C32-SV02-20 and C32-SV02D-20 were identified as field duplicates. No volatiles were detected in any of the samples with the following exceptions:

## **Introduction**

This data review covers thirteen air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per modified EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%RSD	Associated Samples	Flag	A or P
7/17/03	Hexachlorobutadiene	44	39D-FLUX 1 39D-FLUX 2 FCS-FLUX 2 FCS-FLUX 2 Duplicate FCS-INFL-FLUX 3 33D-FLUX 2	J detects, UJ nondetects	A
6/13/03	Methylene Chloride Hexachlorobutadiene	36 34	33D-FLUX N(2) 39D-FLUX 1 39D-FLUX N(1) FCS-FLUX 1 FCS-FLUX 1-R FCS-FLUX-N1 FCS-FLUX-N1-R	J detects, UJ nondetects	A

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0% with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
8/5/03	Vinyl Chloride	40	39D-FLUX 1 39D-FLUX 2 FCS-FLUX 2 FCS-FLUX 2 Duplicate FCS-INFL-FLUX 3 33D-FLUX 2	J detects, UJ nondetects	A

All of the continuing calibration RRF values were within validation criteria.

## V. Blanks

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks.

## VI. Surrogate Spikes

Surrogates were not required by the method. However, the laboratory analyzed surrogates. All surrogate percent recoveries (%R) were within QC limits with the following exception:

Sample	Surrogate	%R (Limits)	Compound	Flag	A or P
FCS-INFL-FLUX 3	4-Bromofluorobenzene	148 (70 – 130)	Tetrachloroethene 1,3-Butadiene trans-1,2-Dichloroethene Methylene Chloride	J detects	A

The laboratory noted that the surrogate recovery exceeded control limits due to matrix interference. The sample was reanalyzed to confirm the result.

## VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD) with the following exception:

Compound	Concentration (ppbv)		RPD
	FCS-FLUX 2	FCS-FLUX 2 Duplicate	
1,1-Dichloroethene	0.01845	0.1007	26

## **VIII. Laboratory Control Samples (LCS)**

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within the QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
0307523-15A	Vinyl Chloride	149 (80 – 120)	39D-FLUX 1 39D-FLUX 2 FCS-FLUX 2 FCS-FLUX 2 Duplicate FCS-INFL-FLUX 3 33D-FLUX 2	J detects	A
0307523-15B	Vinyl Chloride	124 (80 – 120)	33D-FLUX N(2) 39D-FLUX 1 39D-FLUX N(1) FCS-FLUX 1 FCS-FLUX 1-R FCS-FLUX-N1 FCS-FLUX-N1-R	J detects	A

## **IX. Regional Quality Assurance and Quality Control**

Not applicable.

## **X. Internal Standards**

All internal standard areas and retention times were within QC limits.

## **XI. Target Compound Identifications**

All target compound identifications were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XII. Compound Quantitation and CRQLs**

All compound quantitation and CRQLs were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XIII. Tentatively Identified Compounds (TICs)**

No TICs were reported.

#### **XIV. System Performance**

The system performance was within validation criteria for samples on which an EPA Level IV review was performed. Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

#### **XV. Overall Assessment of Data**

Data flags have been summarized at the end of the report.

The laboratory analyzed a shorter target list by low level SIM analysis than that specified in the QAPP as indicated on the chain-of-custody (COC). Results in this SDG may not be comparable to historical data.

#### **XVI. Field Duplicates**

There were no field duplicate samples identified in this SDG.

#### **XVII. Field Blanks**

There were no field blank samples identified in this SDG.

## **Introduction**

This data review covers six air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per modified EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

Sample C10-SV04-20 was received at 0.0" Hg.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds with the following exception:

Date	Compound	%RSD	Associated Samples	Flag	A or P
7/29/03	Chloromethane	37	All samples in the SDG	J detects, UJ nondetects	A

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within QC limits of 70 – 130%.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

### **VIII. Laboratory Control Samples (LCS)**

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
0307609	Bromomethane Chloroethane	132 (80 – 120) 131 (80 – 120)	All samples in the SDG	J detects	A
0307609	1,2,4-Trimethylbenzene	79 (80 – 120)	All samples in the SDG	J detects, UJ nondetects	A

### **IX. Regional Quality Assurance and Quality Control**

Not applicable.

### **X. Internal Standards**

All internal standard areas and retention times were within QC limits.

### **XI. Target Compound Identifications**

Raw data were not evaluated for this SDG.

### **XII. Compound Quantitation and CRQLs**

Raw data were not evaluated for this SDG.

The laboratory noted that sample C10-SV04-20 was over-diluted. No reanalysis was possible.

### **XIII. Tentatively Identified Compounds (TICs)**

No TICs were reported.

### **XIV. System Performance**

Raw data were not evaluated for this SDG.

## XV. Overall Assessment of Data

Data flags have been summarized at the end of the report.

## XVI. Field Duplicates

Samples FCS-SP07-5 and FCS-SP07D-5 were identified as field duplicates. No volatiles were detected in any of the samples with the following exceptions:

Compound	Concentration (ppbv)		RPD
	FCD-SP07-5	FCD-SP07D-5	
Freon 113	3600	4900	31
Chloroform	17	21	21
Trichloroethene	55	62	12
Trichloroethene	480	600	22
Acetone	79	97	20

## XVII. Field Blanks

The trip blank sample (10D-TB072403) in this SDG was not selected for validation. No volatile contaminants were found in this blank above the reporting limits.

## **Introduction**

This data review covers twelve air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per modified EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds with the following exceptions:

Date	Compound	%RSD	Associated Samples	Flag	A or P
7/17/03	Hexachlorobutadiene	44	FLUX-B2 C14-FLUX1 FLUX-B1 36D-FLUX2 37D-FLUX2 36D-FLUX1 36D-FLUX1 Duplicate 36D-FLUXN C14-FLUX2 C14-FLUXN2 37D-FLUX1 37D-FLUXN1	J detects, UJ nondetects	A

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0% with the following exception:

Date	Compound	%D	Associated Samples	Flag	A or P
8/5/03	Vinyl Chloride	-40	37D-FLUXN1	J detects, UJ nondetects	A

All of the continuing calibration RRF values were within validation criteria.

## V. Blanks

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## VI. Surrogate Spikes

Surrogates were not required by the method. However, the laboratory analyzed surrogates. All surrogate percent recoveries (%R) were within QC limits with the following exception:

Sample	Surrogate	%R (Limits)	Compound	Flag	A or P
LCS (0307611-15A)	1,2-Dichloroethane-d4	150 (70 – 130)	Vinyl Chloride 1,1-Dichloroethene 1,1-Dichloroethane cis-1,2-Dichloroethene Chloroform 1,1,1-Trichloroethane	None	P

## VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

## VIII. Laboratory Control Samples (LCS)

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within the QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
0307611-15A	Vinyl Chloride	124 (80 – 120)	FLUX-B2 C14-FLUX1 FLUX-B1 36D-FLUX2 37D-FLUX2 36D-FLUX1 36D-FLUX1 Duplicate	J detects	A

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
0307611-15B	Vinyl Chloride	141 (80 – 120)	36D-FLUXN C14-FLUX2 C14-FLUXN2 37D-FLUX1	J detects	A
0307611-15C	Vinyl Chloride	149 (80 – 120)	37D-FLUXN1	J detects	A

## IX. Regional Quality Assurance and Quality Control

Not applicable.

## X. Internal Standards

All internal standard areas and retention times were within QC limits with the following exceptions:

Sample	Internal Standards	Area (Limits)	Compound	Flag	A or P
37D-FLUX2	1,4-Difluorobenzene	995609 (996095-1660159)	Chloroform 1,1,1-Trichloroethane Benzene 1,2-Dichloroethane	J detects, UJ nondetects	P

## XI. Target Compound Identifications

All target compound identifications were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria for samples on which an EPA Level IV review was performed.

Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## XIII. Tentatively Identified Compounds (TICs)

No TICs were reported.

## XIV. System Performance

The system performance was within validation criteria for samples on which an EPA Level

IV review was performed. Raw data were not evaluated for the samples reviewed by EPA Level III criteria.

## **XV. Overall Assessment of Data**

Data flags have been summarized at the end of the report.

The laboratory analyzed a shorter target list by low level SIM than that specified in the QAPP as indicated on the chain-of-custody (COC). Results in this SDG may not be comparable to historical data.

## **XVI. Field Duplicates**

There were no field duplicate samples identified in this SDG.

## **XVII. Field Blanks**

There were no field blank samples identified in this SDG.

## **Introduction**

This data review covers five air samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per modified EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0% with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
8/10/03	Methyl tert-butyl ether	39	FCS-SP10-10 FCS-SP10D-10	J detects, UJ nondetects	A
8/10/03	Chloroethane	37	33D-SP05-5 39D-SP05-5	J detects, UJ nondetects	A
8/11/03	Methyl tert-butyl ether (MTBE)	31	AJLA-SP05-5	J detects, UJ nondetects	A

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within 70 – 130% QC limits.

## VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

## VIII. Laboratory Control Samples (LCS)

Although laboratory control samples were not required by the method, laboratory control samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

## **Introduction**

This data review covers one air sample listed on the cover sheet including dilutions and reanalysis as applicable. The analysis was per modified EPA Method TO-14A for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999); the following subsections correlate to the above guidelines.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U     Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J     Indicates an estimated value.
- R     Quality control indicates the data is not usable.
- N     Presumptive evidence of presence of the constituent.
- UJ    Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A     Indicates the finding is based upon technical validation criteria.
- P     Indicates the finding is related to a protocol/contractual deviation.
- None   Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## **I. Technical Holding Times**

All technical holding time requirements were met.

## **II. GC/MS Instrument Performance Check**

Instrument performance was checked at 24-hour intervals.

All ion abundance requirements were met.

## **III. Initial Calibration**

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds.

Average relative response factors (RRF) for all volatile target compounds and system monitoring compounds were within validation criteria.

## **IV. Continuing Calibration**

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 30.0%.

All of the continuing calibration RRF values were within validation criteria.

## **V. Blanks**

Method blank analyses were performed at the required frequency. No volatile contaminants were found in the method blanks above the reporting limits.

## **VI. Surrogate Spikes**

All surrogate percent recoveries (%R) were within 70 – 130% QC limits.

## **VII. Matrix Spike/Matrix Spike Duplicates**

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were analyzed at the required frequency. Precision results were within QC limits of 15 relative percent difference (RPD).

## **VIII. Laboratory Control Samples (LCS)**

Although laboratory control samples were not required by the method, laboratory control

samples were reported by the laboratory. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P

## **IX. Regional Quality Assurance and Quality Control**

Not applicable.

## **X. Internal Standards**

All internal standard areas and retention times were within QC limits.

## **XI. Target Compound Identifications**

Raw data were not evaluated for this SDG.

## **XII. Compound Quantitation and CRQLs**

Raw data were not evaluated for this SDG.

## **XIII. Tentatively Identified Compounds (TICs)**

No TICs were reported.

## **XIV. System Performance**

Raw data were not evaluated for this SDG.

## **XV. Overall Assessment of Data**

Data flags have been summarized at the end of the report.

## **XVI. Field Duplicates**

There were no field duplicate samples identified in this SDG.

## **XVII. Field Blanks**

Sample FB-8803 was identified as a field blank sample. No volatile contaminants were found in this blank above the reporting limits.
